**These sets were used as National Grid back up set as standby to base load landfill gas sets. So these sets were used when the gas sets were being maintained. Outside was weathered hence respray - inside will be full cleaned after testing. These generators operate individually or as 3 units producing 5625kW prime power 5.6 mw to the grid. Their location was on a large PLC landfill site so their present external colour is Holly Green however given its weathered dull appearance we will grit blast prime and return to Caterpillar yellow with new fittings as required. Our scope of works given their low hours and Quality will be to resell these generators with warranty to a STOR or PV-Photovoltaics operator / owner to operate a grid connection. Alternatively these would be ideal as standby sets at data centres - cold stores or factory sites. If used in the Export Market, similar projects we have to sold to include Deep Mine operators in South Africa. Whatever your UK project we can work with you a deliver a quality product.**
